Electronic information distributing method e.g. for software
 and image contents - involves initiating execution of restoration program
 for restoration of electronic information only after encrypted random
 number is decoded in management side apparatus and sent to user side
 apparatus

Patent Assignee: FUJITSU LTD (FUJIT)
 Inventor: HIRAGA M; ISOMICHI K; ITOH C; MATSUMOTO T
 Number of Countries: 002 Number of Patents: 002

Abstract (Basic): JP 11039262 A

NOVELTY - Random number is generated by a user side apparatus (1)
 and sent to a management side apparatus (2) along with the encrypted
 random number. The received random number is decoded by the management
 side apparatus and returned to the user side apparatus. Only after
 receiving the random number, the execution of restoration program is
 initiated for restoration of electronic information.

USE - For distributing software and image contents recorded on
 CD-ROM and flexible disc for sale.

ADVANTAGE - Since contents are transmitted without encryption,
 communication cost is reduced. Communication error such as incomplete
 reception of contents is avoided at user's side. Suppresses economical
 loss by misuse of decoding key as decoding key for all the content is
 not managed by server side. DESCRIPTION OF DRAWING(S) - The figure
 shows a block diagram explaining the electronic information
 distributing method.
